

AvenoraHub

From validated idea to a buildable MVP

SOURCE	Continued from Day 22 Startup Validation Report
FOUNDER	Hariprasath M
TARGET MARKET	India — pilot at Rathinam Technical Campus, Coimbatore

Inputs below are carried over from the prior Startup Validation Report rather than re-collected.

EXECUTIVE SUMMARY

Executive Summary

AvenoraHub solves a real but moderate-severity problem — fragmented coursework tools across WhatsApp, Drive, and ad-hoc apps — for technical-college students in India. Early signal is positive (7.5/10 informal feedback) but thin: no structured waitlist, no retention data, no pilot beyond personal circles. This blueprint narrows the next step to a single buildable MVP and a 30-day plan to get real usage evidence before any further build-out.

DIMENSION	READING
Primary customer	Engineering/technical college students, India, 1st–3rd year
Core problem	Fragmented, ungamified coursework coordination
Main competitor	Status quo: WhatsApp + Google Drive (not enterprise LMS)
MVP focus	One pilot club/course, Must-Have features only

IDEAL CUSTOMER PROFILE

Ideal Customer Profile

ATTRIBUTE	PRIMARY ICP	SECONDARY ICP
Who	Engineering/technical college student	Club lead, course rep, or faculty coordinator
Context	Mid-tier private technical campus, India	Same institution, adoption gatekeeper
Current tools	WhatsApp, Google Drive, paper notices	Email circulars, manual tracking
Budget sensitivity	Very high — expects free	Moderate — approves free pilots only

BUYER PERSONA

Buyer Persona

“Sarvesh, the Club Coordinator”	
Role	3rd-year student leading a technical club / hackathon team
Goal	Keep 30–50 teammates aligned without chasing people on WhatsApp
Frustration	Important files buried in chat; no single source of truth before deadlines
What wins him over	A working link he can try in under 2 minutes, zero setup friction

TOP 10 CUSTOMER PAIN POINTS

Top 10 Customer Pain Points

#	PAIN POINT
1	Coursework and announcements scattered across 3–4 disconnected apps
2	No single deadline tracker shared across a team or course
3	Generic quiz tools that aren't tailored to a specific course or club
4	No lightweight way to confirm who actually completed an assigned task
5	Low motivation on existing tools — no gamification or visible progress
6	Important files get buried and lost in fast-moving chat history
7	Last-minute scramble before hackathons/exams due to disorganized resources

#	PAIN POINT
8	Re-sharing everything from scratch when onboarding new members each semester
9	Announcements missed inside noisy group chats
10	Juggling a different tool per course or club, with no unified view

CUSTOMER JOURNEY

Customer Journey

STAGE	WHAT HAPPENS	RISK / FOCUS
Awareness	Hears about it from a friend, club post, or campus demo	Reach is currently tiny — word-of-mouth only
Consideration	Compares it mentally to “we already manage fine with WhatsApp”	Must look obviously easier, not just different
Purchase (Adoption)	Creates an account, tries it for one real task or deadline	Any bug or confusing flow loses them immediately
Retention	Returns weekly through ongoing coursework/club activity	Without a recurring reason to return, usage fades post-deadline

OBJECTIONS & BUYING TRIGGERS

Key Customer Objections and Buying Triggers

KEY OBJECTIONS	KEY BUYING TRIGGERS
“We already manage fine with WhatsApp”	A major deadline approaches and coordination is breaking down
“Will this still be maintained next semester?”	A new semester/course starts and needs fresh structure
“Is our data safe on a student-built platform?”	A peer club/department visibly uses it successfully
“What if the founder graduates or gets busy?”	A faculty member wants better visibility into engagement

MVP RECOMMENDATION

MVP Recommendation

Build first: A single unified hub for one pilot club/course — file/resource sharing, a shared deadline tracker, and one simple quiz/assessment tool. Nothing more.

Do NOT build yet: Gamification/badges, payments or subscriptions, a multi-institution admin dashboard, or a native mobile app. All are premature before one pilot group sticks around for a month.

Success metrics:

- $\geq 60\%$ of the pilot group logs in at least once in week 1
- ≥ 1 resource uploaded or task completed per active member per week
- Pilot group still active in week 3–4 without founder prompting
- Qualitative satisfaction stays at or above the current 7.5/10 baseline

MOSCOW PRIORITIZATION

MoSCoW Prioritization

PRIORITY	FEATURES
Must Have	Unified file/resource hub · shared deadline/task tracker · basic login & roles · one simple quiz tool
Should Have	Notifications/reminders · lightweight activity view for the coordinator
Could Have	Gamification (badges/points) · comments/discussion threads
Won't Have (now)	Payments · multi-college admin panel · native mobile app · AI personalization

PRICING HYPOTHESIS

Pricing Hypothesis

Students are highly price-sensitive and unlikely to pay individually. Hypothesis: stay free for individual students and clubs, and test monetization at the department/institution level instead — a small paid tier for college-wide rollout with an admin dashboard and support, paid by the institution rather than the student. This should be tested, not assumed, once a pilot group sticks.

TOP 5 RISKS

Top 5 Risks

RISK	SEVERITY	NOTE
Technical/scaling	HIGH	More users surface more backend bugs — stabilize before any wider rollout
Execution bandwidth	HIGH	Solo, first-year student founder balancing coursework
IP/ownership	MEDIUM	Originally a multi-person SIH project — clarify terms with teammates
Distribution	MEDIUM	No repeatable acquisition channel beyond personal network yet
Monetization	MEDIUM	Pricing hypothesis untested with any real institution

30-DAY MVP PLAN

30-Day MVP Plan

WEEK	FOCUS	KEY ACTIONS
1	Stabilize & scope	Lock MVP to Must-Have list only; fix top backend bugs
2	Pilot launch	Onboard one real club/course; track activation in real time
3	Iterate	Fix the friction points the pilot group actually hits
4	Decide	Review retention data; decide whether to expand to a 2nd pilot

FOUNDER ACTION SHEET

Founder Action Sheet — Top 10 Next Actions

#	ACTION
1	Lock MVP scope to the Must-Have list only
2	Fix the top 3 backend bugs before onboarding new users
3	Pick one pilot club/course as the first real test group
4	Design a 2-minute onboarding flow with zero setup friction
5	Set up basic usage analytics — logins, uploads, completions
6	Run 10 structured interviews with people outside your circle
7	Clarify IP/ownership with SIH teammates in writing
8	Launch a simple waitlist/landing page for the next campus
9	Define and track the one retention metric that matters most
10	Test the pricing hypothesis with one department or club lead

FINAL VERDICT

Final Verdict

VERDICT

PROMISING BUT UNVALIDATED

AvenoraHub shows a credible problem and a founder with strong domain proximity, but every signal so far is anecdotal. The path forward is not more features — it's running the Must-Have MVP through one real pilot group for 30 days and letting actual retention data decide what comes next.
